

ACKNOWLEDGMENTS

A publication such as this one requires the cooperation of many individuals and institutions who have contributed everything from specimens for examination and essential technical assistance to extensive review comments and illuminating ideas over many years. Following are some of the many contributing individuals and institutions. Within the Systematic Botany and Mycology Laboratory, Harriet Gladish performed continuous typing and editing tasks. James Plaskowitz' expertise in graphics and design has been indispensable in printing the numerous photographs and composing and constructing the black-and-white, color, and line-drawing plates. Thomas Læssøe, Denmark, and Walter Gams, The Netherlands, provided outstanding review and editorial comments in the final stages of this document. Dan Nicolson, Christian Feuillet, both of the Botany Department, Smithsonian Institution, Pavel Lizoň, and Richard P. Korf, both of the Plant Pathology Department, Cornell University, were consulted on a number of nomenclatural issues. Christian Feuillet also translated the new taxon diagnoses into botanical Latin. Milica Tortić, Zagreb, Slovakia, sent copies of the manuscripts concerning taxa described by Schulzer von Muggenberg. Jean-François Magni, France, and Mei-Li Wu, Taiwan, allowed us to reproduce photomicrographs. Paul Diederich, Luxembourg, brought to our attention some recently described species of *Pronectria* and provided copies of the publications as well as a review of the genera that include lichenicolous species. Keith A. Seifert, Ottawa, Ontario, is acknowledged as the source of several of the descriptions and for numerous discussions in which he provided the anamorph perspective. Richard Harris examined the type specimen of *Hydronectria kriegneriana* and rendered his expert opinion on the placement of this species. Kadri Pöldmaa, Tartu, Estonia, contributed significantly to the discussion of *Hypomyces*, and gave us prepublication access to her manuscripts. Dan Mahoney and Ann Bell, New Zealand, supplied information and cultures of *Selinia pulchra*, while Monica Adler, Argentina, shared her observations about the ascocarp development of *S. pulchra*. Invaluable fresh collections from which single ascospores were isolated have been sent to

the authors by Ludwig Beenken, Françoise Candous-sau, Julia Checa, Sabine Huhndorf, Walter Jaklitsch, D. Jean Lodge, Annette Ramaley, Sandy Schein, and Sylvia Stein, just to mention a few. The latter stages of this research were supported in part by NSF grant number 97-12308 of the Partnerships in Enhancing Expertise in Taxonomy (PEET) program.

Numerous herbaria sent reference and type specimens with major contributions from the Farlow Herbarium, Harvard University, Cambridge, Massachusetts (FH); Royal Botanic Gardens, Kew, England (K); Spegazzini Herbarium, La Plata, Argentina (LPS); New York Botanical Garden, Bronx, New York (NY), and the P.A. Saccardo Herbarium, Padova, Italy (PAD). Additional specimens were sent from: Botanischer Garten und Botanisches Museum, Berlin-Dahlem, Germany (B); Herbarium, Jardin Botanique National de Belgique, Meise, Belgium (BR); Botanical Museum and Herbarium, Copenhagen, Denmark (C); Plant Pathology Department, Cornell University, Ithaca, New York (CUP); National Mycological Herbarium, Ottawa, Ontario, Canada (DAOM); Institut für Botanik, Graz, Austria (GRZ); Botanical Museum, University of Helsinki (H); Herbarium, Institut für Allgemein Botanik, Hamburg, Germany (HBG); Herbarium, Plant Biology Department, University of Illinois, Urbana (ILL); CAB International Mycological Institute, now CABI BioScience, Egham, England (IMI); Rijksherbarium, Leiden, Netherlands (L); Estação Agronômica Nacional, Oeiras, Portugal (LISE); Botanische Staatssammlung, München (M); Herbario, Real Jardín Botánico, Madrid, Spain (MA); Laboratoire de Cryptogamie, Muséum National d'Histoire Naturelle, Paris (PC); Manaaki Whenua Landcare Research, New Zealand (PDD); Botany Department, Swedish Museum of Natural History, Stockholm (S); Herbarium, Jardin Botanique, University Louis Pasteur, Strasbourg, France (STR); National Science Museum, Tokyo, Japan (TNS); Academy of Natural Sciences, Philadelphia, Pennsylvania (PH), Botanical Museum, Uppsala University, Sweden (UPS); Naturhistorisches Museum Wien, Vienna, Austria (W); and Herbarium, Eidgenössische Technische Hochschule, Zurich, Switzerland (ZT).
